Mark is a Partner of McGrathNicol Forensic and the leader of its Forensic Technology team, specialising in seizing and analysing digital evidence, data recovery, electronic evidence preservation and conducting other computer related and fraud investigations. A qualified investigator and forensic technology practitioner with 14 years experience as a Detective in the Queensland Police Service and over seven years specialist forensic experience, Mark has led a broad range of matters in Australia and overseas involving digital evidence recovery and analysis, network intrusion, asset tracing and misappropriation.

#### *Experience*

#### *Industry Sector Experience*

Mark has extensive experience across a wide range of industry sectors including business services, financial services, government, insurance, manufacturing, retail and technology. Examples include:

- provided expert witness services with regard to the discovery process undertaken by a major Australian bank. The work consisted of critiquing reports provided by the bank to determine whether or not the discovery process was undertaken correctly;
- provided expert testimony in the New South Wales Supreme Court regarding a forensic technology analysis performed for a murder investigation. The work comprised of conducting an analysis, providing a statement to the Court on the results and subsequently providing evidence with regard to these results;
- managed the forensic technology analysis, investigation and data warehousing of all electronic information and data relating to the HIH corporate collapse;
- provided forensic technology assistance to a leisure company with respect to the production of electronic information to legal teams in the US as a result of discovery orders. The work comprised of the capture, analysis and preservation of a substantial amount of electronic evidence and developing methodologies for data production;
- managed an investigation for APRA with respect to a global insurance institution. Liaised with the subject organisation to ensure all APRA orders for the production of information were met and conducted keyword searches for relevant data; and
- project managed the implementation of a full service electronic discovery capability in support of investigations arising out of corporate collapses and to support specific litigation proceedings.
